The uWatch Cube

CaSSOA is pleased to announce a new partnership with [uWatch](#).

The uWatch cube is a portable, battery and instantly deployable security monitoring device that works in any location.

The Cube is a battery powered computer that captures data from a range of onboard sensors and sends it to the uWatch secure servers. The uWatch servers receive this data in real time, interpret it and immediately send alerts and notifications to your smartphone, tablet or computer.

A uWatch Cube could strategically monitor a number of caravans on a storage site.

The main features of The Cube are:

- PIR Sensor – Detects any movement within a 135 degree angle
- Camera – Takes Date and Time stamped photos
- Shock/Movement Sensor
- Temperature Sensor
- GPS – You can track your Cube's location
- Bluetooth – Connected with additional movement tags

You could mount a cube at any point in the storage site and simply place tags on individual caravans (within 20 metres of the cube). If the tag moves, an alert will be sent to the site owner or security in real time, informing them exactly which caravan has moved.

The same principle could be applied to access points to the caravans on site e.g. put a tag on a gate next to the cube, when the gate opens a picture is taken and an alert is sent. This application would work well on perimeter fencing which often has less protection.

uWatch could also provide a system which could be installed into a site to tell you when a certain caravan enters and leaves your compound. This would be achieved by attaching a Bluetooth tag to each caravan and when it leaves the compound, it is scanned and its unique ID appears on a screen. This prevents someone entering in and old caravan and leaving in a different new caravan.

The Cube contains a cross network SIM and sends real time alerts to your smart phone. There is no WiFi or mains power requirements (although it can connect to mains via android USB) and the cube includes a full year of unlimited data, SIM contract, warranty and full technical support.

Every storage site will likely have different requirements.
