Go Protect Personal Tracking

Our lone worker protection, Go Protect, is a mobile communications device allowing easy wear and discreet operation by the user should they feel their safety may be compromised. Go Protect is fitted with GPS tracking, long battery life and remote speaker control, specifically designed for individuals in vulnerable or high risk situations.

BS8484
Accredited

24/7
monitoring

Remote Monitoring

With Go Protect, the alarm is raised discreetly and safely to our 24/7 Manned Response Centre. The lone worker's call will be monitored by one of our dedicated operators, giving them peace of mind and the assurance they are not alone.

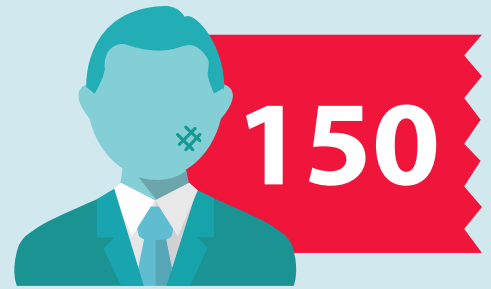

SECOM's Alarm Receiving Centre (ARC) is BS8484 accredited, so should we receive an urgent alert, we can bypass the 999 system and go straight through to the appropriate police force.

Protecting Lone Workers in the Workplace

Approximate number of lone workers that are attacked daily

Does your company employ lone workers

Requesting Help

Through the push of both buttons, Go Protect will start the short pre-alarm sequence with a distinct tone and vibration.

This lets you know that an alert is being sent to our Manned Response Centre.

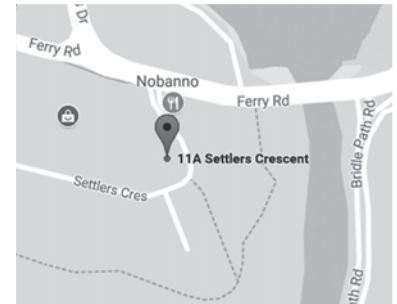

Alarm Response

Once the alarm has been received, one of our operators will then call you back promptly.

Go Protect has a two-way speakerphone system allowing you to speak discreetly with the operator, if required. This is only activated when a conversation is necessary, so anyone near the user is unaware SECOM are listening in.

GPS Tracking

Go Protect will obtain your current location and send it to the operator, who will send for assistance, or organise emergency services if required.

When an operator ends the call your location continues to be sent, and they can still call you back if required.

Go Protect Key Features and Benefits

GPS

In the event of an emergency, GPS co-ordinates are sent to the ARC to inform them of the user's location.

Discreet Alarm

The operator can hear what is going on around you, however, they do not communicate verbally with the device so to keep your alarm discreet and unnoticed.

Speakerphone

Go Protect's advanced speakerphone allows the user to clearly communicate with the ARC in the event of an emergency.

Fall Detection

Go Protect has fall detection capabilities that can be optionally turned on. In the event of a fall, Go Protect will detect a fall and a period of no movement and signal an alarm. The ARC will then be contacted and are able to speak to the user and send for emergency help if needed.

Safety Voice Announcements

Go Protect's advanced safety's features include, IP connection and telecare heartbeats, power management, voice notifications (incl. cellular and power) and more.

Cloud Connect Updates

SECOM are able to push updates to the device remotely.

1-2 Month Battery Life and Wireless Charging

Go Protect has an impressive 1-2 month battery life and simple, wireless charging to ensure that your safety is covered every step of the way.

IP67 Water Rated

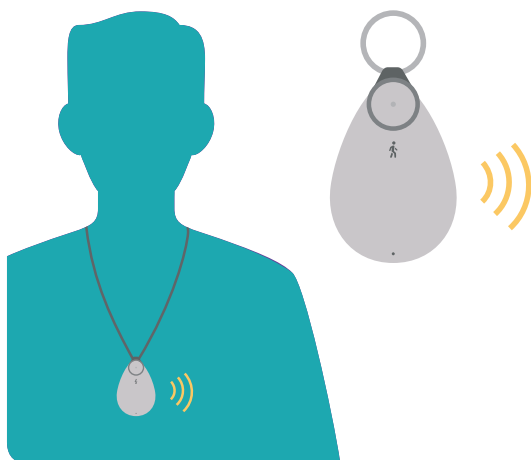

Go Protect is IP67 water rated, keeping you safe no matter the weather, rain or shine.

Who Can Benefit From a Lone Worker Device?

Typical lone workers include...		Typical risks that lone workers might face ...	
 Estate Agents	 Engineers	 Verbal abuse	 Physical abuse
 Tutors	 Cleaners	 Accident	 Environmental
 Night shift staff <small>(Security guards, factory workers)</small>	 Delivery drivers	 Stress	 Illness
 Healthcare professionals	 Transport Workers	 Electrical Hazards	 Chemical Hazards

Are Your Key Holders Protected?

Key holders play an important role in protecting businesses as they respond to alarm activations, often late at night, to investigate a disturbance. As a result they are at a higher risk of violence.

With Go Protect, you can rest assured that your key holders will be monitored by one of our dedicated manned response operators in our own alarm receiving centre. The device can even be set with a timed function, whereby if the employee fails to report in at an agreed time, an operator can call the device to check on the employee and if necessary escalate the situation with an emergency response.
