audio challenges

Operator escalates

A man with short blonde hair and glasses, wearing a blue uniform and a headset, is smiling slightly. He is in a control room with multiple computer monitors in the background. A patch on his uniform reads "SECURITY" and "SECOM".

SECOM External Virtual Guard detects events at the perimeter before a criminal has the chance to break in.

The event is recorded and sent to the operator, giving a clear and immediate understanding of what caused the activation, enabling them to do their job faster with a much higher level of certainty. This allows for crucial time savings in evaluating the incident and deciding what escalation is required.

The operator can also text the video event to the customer giving them the option to dispatch or disregard the alert.

Incredibly fast

Upon detection, CCTV footage is sent straight to the operator to evaluate and determine the appropriate action.

SECOM External Virtual Guard features & benefits

- Operator can issue a live voice challenge to site
- Video link can be sent to customer via SMS
- Customer can decide what action to take
- Ideal for enclosed or low traffic areas
- Quick install - no additional software needed
- Wire free, battery operated detectors
- Compatible with most existing IP and analogue CCTV systems
- Significantly cheaper than manned guards or traditional forms of CCTV monitoring
- Over 30 years' remote CCTV monitoring experience

Low cost

Quick install

Wire free

No More False Alarms

Animals moving across the detection range of an outdoor motion sensor make up a large percentage of unnecessary activations.

With **SECOM External Virtual Guard**, our outdoor motion sensors ignore animal movement, which avoids the hassle of false activations and allows potential offenders to be detected.
