- ✓ Remote 4G connectivity
- ✓ 24/7 SECOM Gold monitoring support
- ✓ Customised app alerts

- ✓ Local storage
- ✓ IR for day and night charging
- ✓ Built-in rechargeable battery
- ✓ 256GB memory

Alongside the water- and dust-resistant camera that uses 120dB true WDR technology for crystal-clear imaging, the solar panel's battery can work for up to seven days in rainy or cloudy weather when fully charged. You can receive personalised notifications via the app to reduce unwanted activations and find out when your battery is running low.

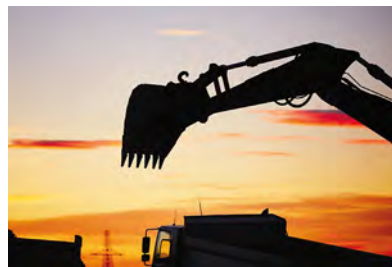

High quality 2MP camera with the ability to capture vehicle number plates (subject to camera placement) during the day or at night

You can use the system in areas that are not suitable for laying wired networks or electric supply lines, or tough environments that require a high level of device stability. It can be used for monitoring farms, electric power cables, water and river systems, oil pipelines and key forest areas, as well as temporary monitoring scenes such as large-scale competitions, sudden public activity, traffic control and city construction.

Who exactly is it for? The simple answer is anyone. From local councils and city buildings, educational settings and industrial sites, through to car parks and farmers, or environmental agencies monitoring bridges and flooding. No matter where you are, we can help you install and monitor your brand new solar-powered CCTV system.

WHERE THERE'S SUN THERE'S SECURITY
